**Data Protection Act 1998
Disclosure of Disease Status**

Veterinary Practice

of

This applies in relation to each and every pig production site owned on this date or in future by me or by my employer or by me in partnership with another. It also applies in relation to each and every pig production site on which pigs owned by me or by my employer or by me in partnership with another are held on this date or in future. I hereby confirm that I am authorised by any such employer or partner to sign this document on their behalf.

I hereby consent to and authorise the attending veterinarian in the above veterinary practice to disclose the disease status of these pig production sites in relation to Enzootic Pneumonia, PRRS, Mange and Swine Dysentery, together with, optionally, certain relevant production data, to the BPEX division of the Agriculture and Horticulture Development Board (BPEX) or any agent of BPEX for incorporation into and use in relation to the BPEX Pig Health Information System (BPEX PHI System). I understand that the detailed information thus disclosed will be held in confidence within the BPEX PHI System and will not be disclosed to any third party otherwise than as required by law except with my written or electronic permission (or that of my partner or employer, if any).

I hereby consent to and authorise BPEX to disclose the disease status of the pig production sites described above to other members of those Health Management Clusters of which I am, or my employer is, a member, provided that such other members have similarly authorised disclosure of their disease status to me. *[delete if such disclosure is not permitted]*

I understand and consent to the disclosed disease status being published using the BPEX/YHH Mapping System, knowing that the status of each of the pig production units described above as known at the date of the latest veterinary opinion or laboratory evidence thereon will be visible to YHH Registered Users based on a traffic light system for each disease together with that date as follows:

- Green** Believed free from the disease concerned on the basis of veterinary opinion, utilising if necessary the agreed diagnostic procedures.
- Amber** Disease agent present on the farm on the basis of veterinary opinion and/or vaccination or medication in place to control the disease concerned or suppress clinical signs.
- Red** *Either* Status not known,
Or Disease agent known to be present on the basis of veterinary opinion, but no recognised control procedure in place.

Registered Users who are not members of a cluster will be able to view this data aggregated to the Ordnance Survey Grid (only results for a given grid size containing a minimum of 5 units for which disease data exists, will be displayed).
